Detailed Action

Sequence Compliance

1. This application fails to comply with the requirements of 37 C.F.R. §§ 1.821-1.825 because the claim 52 recites a particular sequence and is not identified by a unique sequence identifier. Correction is required.

Preliminary Amendment

2. A substitute specification comprising the changes to the specification as set forth in the preliminary amendment filed 12-29-00 is required pursuant to 37 CFR 1.125(a) because the changes are too numerous to enter legibly and the amendment is not in compliance with the new rules because it requires deletions and insertions within the same paragraph.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by:

- 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.

Election/Restriction

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 40-43 and 48-52, drawn to methods of making reshaped antibodies, classified in class 435, subclass 70.21.

Art Unit: 1645

II. Claims 44-47 and 53-57, drawn to a single chain antibody, classified in class 530, subclass 387.3.

4. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by chemical or point mutagenesis of a CDR-grafted antibody.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

8. A complete response to this Office action requires (a) proper sequence compliance for the claims; (b) a substitute specification and (c) an election.
